

Moody Monetization Setup Guide

This guide covers setting up RevenueCat for in-app purchases and subscriptions in Moody.

Overview

Moody uses RevenueCat to manage:

- Premium subscriptions (monthly, annual, lifetime)
- Mini-games pack (one-time purchase)
- Caliente mode (one-time purchase)

Prerequisites

- Apple Developer Account (for iOS)
- Google Play Developer Account (for Android)
- RevenueCat account (free tier available)

1. RevenueCat Dashboard Setup

Create Project

1. Go to [RevenueCat Dashboard](https://app.revenuecat.com) (<https://app.revenuecat.com>)
2. Create a new project named “Moody”
3. Note your API keys for iOS and Android

Configure Entitlements

Create the following entitlements:

Identifier	Description
<code>premium</code>	Full premium access
<code>mini_games_pack</code>	Mini-games feature
<code>caliente_mode</code>	Caliente mode feature

Configure Offerings

Create a “default” offering with these packages:

Package	Type	Products
Monthly	MONTHLY	iOS + Android monthly subscription
Annual	ANNUAL	iOS + Android annual subscription
Lifetime	LIFETIME	iOS + Android lifetime purchase

2. App Store Connect Setup (iOS)

Create Products

1. Go to App Store Connect > Your App > Features > In-App Purchases
2. Create the following products:

Product ID	Type	Price
com.tonorga.moody.premium.monthly	Auto-Renewable Subscription	\$4.99/month
com.tonorga.moody.premium.annual	Auto-Renewable Subscription	\$29.99/year
com.tonorga.moody.premium.lifetime	Non-Consumable	\$79.99
com.tonorga.moody.minigames	Non-Consumable	\$2.99
com.tonorga.moody.caliente	Non-Consumable	\$1.99

Create Subscription Group

1. Create a subscription group named “Moody Premium”
2. Add monthly and annual subscriptions to this group
3. Set subscription rank (annual > monthly)

Connect to RevenueCat

1. In RevenueCat, go to Project Settings > Apps > iOS
2. Add your App Store Connect API Key:
 - Go to App Store Connect > Users and Access > Keys
 - Generate an API key with “App Manager” role
 - Download the .p8 file
 - Enter Key ID, Issuer ID, and upload .p8 in RevenueCat

3. Google Play Console Setup (Android)

Create Products

1. Go to Google Play Console > Your App > Monetize > Products
2. Create subscriptions:

Product ID	Type	Price
moody_premium_monthly	Subscription	\$4.99/month
moody_premium_annual	Subscription	\$29.99/year
moody_premium_lifetime	In-app product	\$79.99
moody_minigames	In-app product	\$2.99
moody_caliente	In-app product	\$1.99

Connect to RevenueCat

1. In RevenueCat, go to Project Settings > Apps > Android
2. Add your Google Play credentials:
 - Create a service account in Google Cloud Console
 - Grant "Financial Data" access in Play Console
 - Upload the JSON key file to RevenueCat

4. Environment Configuration

Add to your `.env` file:

```
EXPO_PUBLIC_REVENUECAT_IOS_KEY=appl_XXXXXXXXXXXXXXXXX
EXPO_PUBLIC_REVENUECAT_ANDROID_KEY=goog_XXXXXXXXXXXXXXXXX
```

5. Testing Purchases

iOS Sandbox Testing

1. Create sandbox tester in App Store Connect:
 - Users and Access > Sandbox > Testers
 - Add a new tester with a unique email
2. On test device:
 - Sign out of App Store (Settings > Media & Purchases)
 - When prompted during purchase, sign in with sandbox account
3. Sandbox subscription timing:
 - 1 week = 3 minutes
 - 1 month = 5 minutes
 - 1 year = 1 hour

Android Testing

1. Add license testers in Play Console:
 - Settings > License Testing
 - Add tester email addresses
2. Use test cards:
 - Card number: 4242 4242 4242 4242
 - Any future expiry and CVC
3. Test subscription timing:
 - Similar accelerated renewal periods

RevenueCat Sandbox Mode

1. In RevenueCat dashboard, toggle “View Sandbox Data”
2. Monitor test purchases in real-time
3. Use RevenueCat debugger for troubleshooting

6. Integration with Affiliate System

Purchases automatically sync with the affiliate system:

1. When a purchase completes, `syncPurchaseWithAffiliate()` is called
2. If user has an affiliate code applied, conversion is tracked
3. Commission is calculated based on affiliate’s rate

See `services/affiliateService.ts` for details.

7. Webhooks (Optional)

For server-side purchase validation:

1. In RevenueCat, go to Project Settings > Integrations > Webhooks
2. Add your webhook URL
3. Select events to receive:
 - INITIAL_PURCHASE
 - RENEWAL
 - CANCELLATION
 - EXPIRATION

8. Analytics

RevenueCat provides built-in analytics:

- Revenue metrics
- Subscriber counts
- Churn rates
- Trial conversions

Access via RevenueCat Dashboard > Charts.

Troubleshooting

Common Issues

“No offerings available”

- Ensure products are approved in App Store Connect / Play Console
- Check product IDs match exactly
- Verify RevenueCat API keys are correct

“Purchase failed”

- Check sandbox/test account is properly configured
- Ensure device is signed in with test account
- Review RevenueCat debug logs

“Entitlement not active after purchase”

- Verify entitlement is linked to product in RevenueCat
- Check offering configuration
- Wait a few seconds and refresh customer info

Debug Mode

Enable debug logs in development:

```
import Purchases, { LOG_LEVEL } from 'react-native-purchases';  
Purchases.setLogLevel(LOG_LEVEL.DEBUG);
```
